January 7, 1975

Mr. Spyros T. Pavlos  
Research Assistant Professor  
Department of Oceanography  
University of Washington  
Seattle, Washington 98195

Dear Mr. Pavlos:

Attached is a copy of a memo report from Dr. J. N. Blazevich presenting results of a survey conducted during August 1974 in the Duwamish for the purpose of identifying potential sources of PCB. This survey was opened at a meeting in METRO's offices on July 12, 1974 - a list of participants is attached.

These data, along with subsequent surveys conducted incident to the recent spill, should provide a fairly complete picture of the PCB levels in the Duwamish. Results of these sampling programs are currently being summarized and copies will be forwarded to you in the near future.

Sincerely,

Francis L. Falcon  
Chief, Technical Support Branch
